What should I already know?			Diagrams						
 Certain things produce light, usually by burning (e.g. the Sun) or electricity (e.g. street lights) 			v are sha	idows formed?					
Shiny ma	 A light source is something that emits light by burning, electricity or chemical reactions. 	4		Rays of light Shadow					
source?	 Burning light sources include the Sun, flames from a fire and stars. We must never look directly at the Sun as the light produced is very bright and can be harmful to our eyes. This is why we wear sunglasses. Electric lights include lamps, car headlights and street light. Lights that are caused by chemical reactions are much less common. This happens when different chemicals react and light is a product of that reaction. Examples can include glow sticks and fire flies. 	s v V li n v c s s T n a s s s	 When light is blocked by an opaque object, a dark shadow is formed. An opaque material blocks light so we can't see through it and shine a light through it. When light is shone onto a transparent object, the light travels through it, we can see through it and it makes a very faint shadow. When light is shone onto a transluscent object, some of the light travels through it, we can see bright light sources through it and it makes a fairly dark shadow. The size of a shadow changes as the light source moves. The further away the light source is, the smaller the shadow is. The closer the 						
Why do we need light?	 We need light so that we are able to see in the dark. This is because the dark is the absence of light. The Sun and stars always give us light but we can only see the stars when it is dark. At night time we 	s t		the light, LARGE SHADOW when the toy is SHADOW when the toy is a long way from the					
				Vocabulary					
	cannot see the Sun's light as the Earth turns and our part of the Earth is not lit up by the Sun at	angle		the direction from which you look at something					
	night.	brigh	right a colour that is strong and noticeable, an not dark						
	When we are driving, we need car headlights or street lights to help us.	chem react		a process that involves changes in the structure of something					
	 If we are walking or out in the dark, we would need torches to help us see. You should not 	dark		the absence of light					
	look directly into the torch as this is dangerous.	dim		light that is not bright					
What are not	 The Moon is not a source of light even though we can see it in the dark. 	electi	icity	a form of energy that can be carried by wires and is used for heating and lighting, and to provide power for machines					
sources of light?	• This is because the Sun's light reflects on the	emits		to emit a sound or light means to produce it					
	surface of the Moon making it appear as though	light		a brightness that lets you see things.					
	 the Moon emits light. Shiny things are not light sources - they appear to be sources of light as they are bright. 		r	a flat piece of glass which reflects light , so that when you lookat it you can see yourself reflected in it					
How	Light travels in straight lines.	opaq	ue	if an object or substance is opaque , you cannot

	appens when light is reflected from different surfaces ? appens when light is reflected from a mirror ? What	trans	ucent	if a material is translucent , some light can pass through it					
	s when the angle of the mirror (or light source changes?)			If an object or substance is transparent, you can					

transparent

see through it

happens when the angle of the mirror (or light source changes?)

Question 1: How does light travel?	Start of unit:	End of unit:	Question 6: Shadows are formed when	Start of unit:			d of nit:	
In a straight line			light is let through an object					
In a curvy line			light reflects off an object					
Light is everywhere			it is dark	\vdash				
Light does not travel			light cannot travel through					
			an object	L				
Question 2: Dark means	Start of unit:	End of unit:	Question 7: Mirrors work by	Start of unit:			d of nit:	
when there is a little bit of light so you can see			letting light through that hits them					
the absence of light			absorbing light that hits					
you have to eat carrots so			them	┣──				
you can see			reflecting light that hits them					
Question 3: When light	stion 3: When light Start of End of shadow becomes		Question 8: The size of a shadow becomes smaller		Start of unit:		End of unit:	
bounces off a surface, it is	unit:	unit:	when the object is close to					
absorbed			the light source	<u> </u>				
dissolved			when the object is far from the light source					
reflected			the distance between the					
bounced			light source and the object					
			stays the same					
Question 4: Sources of light include(tick three)	Start of unit:	End of unit:	Question 9: How do we see	Sta	rt of	Enc	d of	
the sun			an object? Light reflects off the object	unit:		unit:		
the moon			and enters our eyes					
street lights			Light travels from our eyes and reflects off the object					
torches			Light reflects off our eyes					
			and enters the object	<u> </u>				
Question 5: Looking directly at the Sun is	Start of unit:	End of unit:	Question 10: Match the words their description:	to	Start uni		End of unit:	
safe			you cannot see translucent through it and a d	lark				
dangerous			shadow is form	ed				
ok if there are clouds		you can see a lit						
ok if the sun is rising or setting			light through it and a transparent fairly dark shadow is formed					
			opaque you can see throu completely and a f shadow is form	faint
